

VITALLOOP

The AI operating layer that turns lab results into weekly health actions and measurable outcomes.

- Frontend live
- API live
- CRM live
- LLM health checks
- Commit-verified deploys
- B2C + B2B pathway

Equity

\$4-7M

Pre-money

Labs generate data. Users and practitioners still lack decisions.

Raw reports, no prioritization

Consumers pay for tests and receive disconnected values without ranking, context, or next actions.

High interpretation cost

Manual review consumes specialist time and creates delays before behavior change starts.

No longitudinal memory

Most tools treat each report as isolated, so trend inflections and compounding risk are missed.

Category timing is favorable

Preventive health adoption, AI readiness, and recurring testing behavior are converging now.

Willingness to pay exists

ICP segments already spend on tests, supplements, and coaching; decision-support is the missing layer.

Distribution already mapped

Direct user flow plus practitioner CRM creates a compounding B2C-to-B2B acquisition flywheel.

From report upload to adaptive protocol in a **single loop**.

STEP 01**Upload**

Any lab PDF/image from any provider.

STEP 02**Extract**

OCR captures biomarkers and units.

STEP 03**Interpret**

LLM pipeline ranks risk and priorities.

STEP 04**Protocol**

Weekly actions tied to biomarkers.

STEP 05**Adapt**

Next upload improves signal quality.

What is live today

- Frontend domain and PWA shell in production
- FastAPI backend with health and readiness checks
- Practitioner CRM surface and role-gated access
- LLM connectivity health endpoint for operations
- Deployment validation with commit matching

Why retention compounds

- Every new lab upload increases profile depth
- Protocol evolves weekly, not static one-off advice
- Practitioner workflow aligns with recurring checks
- Historical trend memory improves decision confidence

Large market, strong growth, and ICPs that already spend on outcomes.

15-24% Category CAGR across biohacking, longevity, and prevention-first health services.

3 ICPs Biohackers, performance-focused users, and functional practitioners with high test frequency.

2 GTM lanes Direct consumer acquisition plus practitioner adoption with white-label reporting upside.

Recurring behavior Natural re-test cadence supports sticky subscriptions and longitudinal value expansion.

Freemium funnel into recurring plans with practitioner expansion.

FREE

\$0

Entry product

- First upload analysis preview
- Basic biomarker visibility
- Conversion trigger to paid protocol

PERSONAL PRO

\$9.99

Per month

- Full protocol and weekly adaptation
- Longitudinal insights and priorities
- Core recurring-revenue engine

PRACTITIONER

B2B

Tiered pricing

- Client management + CRM workflows
- Branded report delivery
- Team/organization seat expansion

Revenue thesis

- Low-friction free entry maximizes top-of-funnel
- Protocol value drives paid conversion
- Weekly loop supports retention and LTV growth

Defensibility thesis

- Longitudinal user data and behavior graph
- Practitioner workflow lock-in via CRM operations
- Operational reliability stack for AI outputs

Capital to complete scale-up and convert readiness into recurring revenue.

\$750K

Pre-Seed / Seed

Pre-money	\$4M-\$7M
Equity	12-15%
Stage	90% product-ready
Use window	18 months runway

Milestone target: launch readiness → repeatable paid conversion → practitioner pilots → stronger Series A position with clearer retention and revenue proof.

The default **AI decision layer** between lab data and better health outcomes.

VITALLOOP combines analysis, protocol, and adaptation in one recurring loop. The product is deployed, the value proposition is concrete, and the next phase is scaled distribution and monetization.
